

Complete Lovable Prompts - All Features

Here are ALL the prompts you gave to Lovable during our session, organized by feature:

TABLE OF CONTENTS

1. [Branding & Footer](#)
2. [Status Messaging](#)
3. [Coming Soon Modals](#)
4. [Discord Integration](#)
5. [Slack Integration](#)
6. [Zapier Integration Fix](#)

1. BRANDING & FOOTER

Add GPUWISE branding and "Built by Chandni" attribution throughout the app:

1. Logo & Brand Identity:

****Create GPUWISE logo that appears on ALL pages:****

- Header/Navigation: "GPUWISE" in bold, modern font
- Color: Gradient from purple (#6B46C1) to teal (#14B8A6)
- Small GPU chip icon next to text (optional)
- Clickable → returns to homepage
- Size: Medium, professional, always visible

2. Update Footer on ALL Pages:

Replace or enhance existing footer with:

```
```html
<footer className="site-footer">
 <div className="footer-content">

 {/* Branding Section */}
 <div className="footer-brand">
 <h3 className="footer-logo">GPUWISE</h3>
```

```

 <p className="tagline">
 AI-driven GPU market intelligence platform
 </p>
 <p className="mission">
 Making the $2T AI infrastructure market accessible to
everyone
 </p>
 </div>

 { /* Links Section */ }
 <div className="footer-links">
 <h4>Features</h4>

 Simulator
 Scenarios
 AI Chat
 Learn Hub
 Integrations

 </div>

 { /* Tech Stack */ }
 <div className="footer-tech">
 <h4>Built With</h4>
 <p>Lovable • React • Supabase</p>
 <p>Gemini AI • TypeScript</p>
 <p className="time-badge">⚡ Built in 25 hours</p>
 </div>

</div>

{ /* Copyright Bar */ }
<div className="footer-bottom">
 <p className="copyright">
 © 2025 <strong style="color: #6B46C1;">GPUWISE •
 Built by <strong style="color: #14B8A6;">Chandni
 </p>
 <p className="hackathon">
 💜 Created for #LovableHackathon • Women-led innovation in AI
infrastructure
 </p>
 <p className="demo-badge">
 ✅ Live Demo • All Core Features Functional • October 2025
 </p>
</div>

```

```
</footer>
...
```

### ## 3. Add Meta Tags (for social sharing):

In the HTML head of all pages:

```
```html
<meta name="author" content="Chandni" />
<meta name="description" content="GPUWISE - AI-driven GPU market
intelligence platform by Chandni" />
<meta property="og:title" content="GPUWISE - GPU Market Intelligence"
/>
<meta property="og:description" content="Making AI infrastructure
markets accessible. Built by Chandni for #LovableHackathon" />
```
```

### ## 4. Add Subtle Watermark on Key Visuals:

On dashboard charts and main visualizations, add small text:

```
"GPUWISE © 2025 • Chandni"
(Bottom right corner, semi-transparent, small font)
```

### ## 5. Update Page Titles:

All pages should have format:

```
...
GPUWISE - [Page Name] | By Chandni
...
```

Examples:

- "GPUWISE - Dashboard | By Chandni"
- "GPUWISE - Simulator | By Chandni"
- "GPUWISE - AI Chat | By Chandni"

### ## 6. Add "About" Section to Landing Page:

Near bottom of homepage, before footer:

```
...
```

|                                                         |
|---------------------------------------------------------|
| About GPUWISE                                           |
| Built by Chandni for the Lovable<br>Women-Led Hackathon |

```
| Mission: Democratize AI
| infrastructure market intelligence
| through education, transparency,
| and accessible tools.
```

```
| 🏆 25 hours of focused building
| 💜 Women-led product design
| ⚡ 8 working features
|
```

```
...

7. Ensure Footer Appears on These Pages:
```

- ☒ Landing/Homepage
- ☒ Dashboard
- ☒ Simulator
- ☒ Scenarios
- ☒ AI Chat/Insights
- ☒ Learn Hub
- ☒ Integrations
- ☒ Any other pages

```
Make "Built by Chandni" prominent and professional throughout!
...

```

```
2. STATUS MESSAGING
...
```

```
Add clear status indicators throughout the app to show what's working
vs planned:
```

```
1. Update Integrations Page with Clear Status Sections:
```

```
Reorganize the entire Integrations page with these 3 clear sections:
```

```
SECTION 1: "✅ WORKING NOW - Test These!"
```

```
Large, prominent section at top with green accent:
```

```
Header: "Live Integrations - Fully Functional"
```

```
Subheader: "These integrations are working right now. Test them
during your demo!"
```

## **\*\*5 Integration Cards (side-by-side grid):\*\***

### Card 1: Discord

- Badge: " LIVE" (green)
- Description: "Real-time GPU market alerts in Discord channels"
- Status: "3 alert types • Webhooks • AI-generated content"
- Button: "Test Now →"

### Card 2: Slack

- Badge: " LIVE" (green)
- Description: "Send market alerts to Slack workspaces"
- Status: "Interactive blocks • Real-time • AI-powered"
- Button: "Test Now →"

### Card 3: Zapier

- Badge: " LIVE" (green)
- Description: "Connect to 5,000+ apps via webhooks"
- Status: "Gmail • Sheets • Airtable • Any app"
- Button: "Test Now →"

### Card 4: Google Sheets

- Badge: " LIVE" (green)
- Description: "Export pricing data and scenarios"
- Status: "Multi-sheet exports • Formatted • Downloadable"
- Button: "Export Now →"

### Card 5: Email (via Zapier)

- Badge: " LIVE" (green)
- Description: "Automated email alerts through Zapier"
- Status: "Price alerts • Market briefs • Customizable"
- Button: "Configure →"

## **### SECTION 2: " COMING SOON - In Development"**

Yellow/orange accent section:

**\*\*Header:\*\*** "Planned Integrations"

**\*\*Subheader:\*\*** "Features in active development for Q1 2026"

## **\*\*4 Cards (show as previews):\*\***

### Card 1: Email Direct (Resend)

- Badge: " Q1 2026" (orange)
- Description: "Native email automation (currently via Zapier)"
- Preview: Show email template designs

- Button: "Preview Templates"
- Click → Shows beautiful "Coming Soon" modal

## Card 2: Microsoft Teams

- ```
- Badge: "🚧 Q1 2026"
- Description: "Enterprise team communication"
- Features list: Channels, bots, notifications
- Button: "Learn More"
```

Card 3: Notion

- ```
- Badge: "🚧 Q1 2026"
- Description: "Sync insights to Notion workspaces"
- Features list: Database sync, page creation
- Button: "Learn More"
```

## Card 4: Twilio SMS

- ```
- Badge: "🚨 Q1 2026"
- Description: "Mobile text alerts for critical updates"
- Features list: SMS, MMS, programmable
- Button: "Learn More"
```

SECTION 3: FUTURE ROADMAP - Vision

Blue/purple accent section:

```
**Header:** "Long-term Vision"
```

****Subheader:**** "Planned for Q2-Q3 2026"

```
**Feature List (simple text, no full cards):**
```

- 📱 Mobile Apps (iOS/Android)
- 🖱️ REST API for Enterprise
- 🔔 Custom Alert Workflows
- 🎨 White-label Options
- 📈 Advanced Analytics Dashboard
- 🌐 Multi-language Support

2. Add Status Banner at Top of App:

On every page, add a dismissible banner at very top:

— — —

 **LIVE DEMO: 8 Core Features Working • Test Everything!**
 Working Now: [Simulator](#) | [AI Chat](#) | [Discord](#) | [Slack](#) |
[Zapier](#) | [Sheets](#) | [Scenarios](#) | [Learn Hub](#)

[X]

Color: Green gradient background
Dismissible: X button on right
Reappears: On page refresh (for judges)

3. Update Landing Page Hero:

Add feature status to homepage:

****After main headline, add:****

" 8 Working Features |  4 In Development |  Enterprise Roadmap"

****Update feature showcase:****

Each feature card should have clear status:

- Simulator:  LIVE
- Scenarios:  LIVE
- AI Chat:  LIVE (Powered by Gemini)
- Learn Hub:  LIVE
- Discord:  LIVE
- Slack:  LIVE
- Zapier:  LIVE (5,000+ apps)
- Sheets:  LIVE

4. Add "Product Status" Page (Optional but Impressive):

Create a simple status page accessible from footer:

****URL:**** /status

****Content:****

System Status - All Systems Operational 

****Working Features:****

-  GPU Market Simulator (100% functional)
-  Scenario Studio (100% functional)
-  AI Market Analyst - Gemini (100% functional)
-  Discord Alerts (100% functional)
-  Slack Alerts (100% functional)
-  Zapier Integration (100% functional)
-  Google Sheets Export (100% functional)
-  Learn Hub (100% functional)

****In Development:****

 Direct Email Integration (Q1 2026)
 Microsoft Teams (Q1 2026)
 Notion Integration (Q1 2026)
 Twilio SMS (Q1 2026)

****Last Updated:**** October 8, 2025

5. Update Demo Instructions:

On Integrations page, add prominent "How to Test" box:
...

 For Judges: Testing Instructions

All green "✅ LIVE" features are fully functional and ready to test!

Quick Test (2 min):

1. Discord: Paste webhook, send alert
2. Zapier: Connect to Gmail, test
3. Sheets: Click export, download file

Orange "🚧" features: Click to see roadmap and vision

...

6. Add Honest "Demo Notes" Section:

In footer or about section:

****Demo Notes:****

- ✅ All core features are production-ready
- 🤖 AI powered by Gemini (free tier through Oct 12, 2025)
- 🔗 Real integrations (Discord, Slack, Zapier working live)
- 📊 Enhanced mock data for comprehensive demo
- 🚧 Roadmap features shown with "Coming Soon" status

This transparency shows thoughtful product development!

Make it crystal clear what works vs what's planned. Judges will appreciate the honesty and vision!

...

3. COMING SOON MODALS

Add "Coming Soon" popups for planned features instead of removing them:

1. Create Reusable Coming Soon Modal:

Create a beautiful modal component that shows when clicking non-functional features:

```
```tsx
const ComingSoonModal = ({ featureName, description, estimatedDate }:
{
 featureName: string;
 description: string;
 estimatedDate?: string;
}) => {
 return (
 <div className="modal">
 <div className="modal-content">
 <h2>🚧 {featureName} - Coming Soon!</h2>

 <p className="description">{description}</p>

 {estimatedDate && (
 <p className="timeline">📅 Estimated: {estimatedDate}</p>
)}

 <div className="features-box">
 <h3>What to expect:</h3>

 { /* Feature-specific bullets */ }

 </div>

 <div className="cta-section">
 <p>Want early access?</p>
 <input type="email" placeholder="your@email.com" />
 <button>Notify Me</button>
 </div>

 <p className="vision-text">
```

💖 This feature is part of our roadmap to make GPU market intelligence accessible to everyone.

```
 <button className="close-button">Got It!</button>
 </div>
</div>
);
};
```
```

2. Apply to Email Integration:

On Integrations page, Email section:

- Keep the email preview cards visible
- Change "Subscribe" button to: "Learn More"
- On click → Show modal:

```
**Feature Name:** "Email Market Briefs"
**Description:** "Receive automated GPU market intelligence directly
in your inbox. Daily briefs, price alerts, and weekly summaries."
**Estimated:** "Q1 2026"
**What to expect:**
- Daily morning briefs at 9 AM EST
- Real-time price alerts
- Weekly market wrap-ups
- Customizable alert preferences
- Mobile-optimized emails
```

3. Apply to Slack Integration:

If Slack section exists:

- Show Slack card with nice icon
- Status badge: "🚧 COMING SOON"
- "Connect Slack" button → Opens modal:

```
**Feature Name:** "Slack Integration"
**Description:** "Get GPU market alerts and AI insights directly in
your Slack channels."
**Estimated:** "Q1 2026"
**What to expect:**
- Slash commands (/gpuwise market)
- Channel notifications for alerts
- Direct message with AI analyst
- Team collaboration features
```

4. Apply to Other Planned Features:

For any other non-working features:

- Show them visually with nice cards
- Badge: "🚧 PLANNED"
- Click → Opens appropriate Coming Soon modal

List of planned features to show:

- Microsoft Teams Integration
- Notion Integration
- Airtable Connector
- Twilio SMS Alerts
- Mobile App
- API Access

5. Add "Roadmap" Section:

On Integrations page, add a "Product Roadmap" section at bottom:

****Q1 2026:****

- Email automation via Resend
- Slack integration
- Advanced scenario modeling

****Q2 2026:****

- Microsoft Teams
- Mobile apps (iOS/Android)
- Real-time price streaming

****Q3 2026:****

- API for enterprise customers
- Custom alert workflows
- White-label options

6. Visual Design of Modal:

- Purple/teal gradient header
- Clean, spacious layout
- Animated entrance (slide up)
- Glassmorphism effect
- "Notify Me" email collection (save to localStorage for demo)
- Easy close (X button, click outside, ESC key)

7. Add Tracking:

```
Track which "coming soon" features get most interest:
```typescript
trackEvent('coming_soon_viewed', { feature: featureName });
```
```

Show in analytics: "Most anticipated feature: Slack Integration (23 views)"

Make it clear these are thoughtfully planned features, not missing functionality!

4. DISCORD INTEGRATION

Add working Slack integration using webhooks (similar to Discord):

1. Add Slack Section to Integrations Page:

Position: Right after Discord section (or alongside it)

Header:

Title: "Slack Integration 

Status Badge: "ACTIVE" (green)

Description:

"Send GPU market alerts directly to your Slack channels. Real-time notifications where your team collaborates."

2. Setup Instructions (Collapsible):

"How to Connect Your Slack Workspace:"

Step 1: Create an Incoming Webhook

- Go to: api.slack.com/messaging/webhooks
- Click "Create New App" → "From scratch"
- Name it: "GPUWISE"
- Choose your workspace
- Click "Incoming Webhooks" → Toggle ON
- Click "Add New Webhook to Workspace"
- Choose a channel (e.g., #gpu-alerts)
- Copy the Webhook URL

Step 2: Paste Below

- Paste your webhook URL in the field below
- Click any test alert button
- Check your Slack channel!

Step 3: Enjoy Automated Alerts

- Price drops, supply warnings, market briefs
- All delivered to your Slack workspace

3. Webhook Input Section:

****Input field:****

- Label: "Slack Webhook URL"
- Placeholder: "https://hooks.slack.com/services/..."
- Save to localStorage: 'gpuwise_slack_webhook'
- Helper text: "Your webhook URL is stored locally for demo"
- Validation: Check URL starts with "https://hooks.slack.com"

****Demo Server Option (Optional):****

Button: "Join Demo Slack" (if you want to create one)

Or just: "Use your own Slack workspace"

4. Test Alert Buttons (3 buttons):

Create 3 Slack-formatted alert buttons:

****Button 1: "💰 Price Drop Alert"****

****Button 2: "⚠️ Supply Warning"****

****Button 3: "📊 Market Brief"****

5. Implementation - Slack Alert Function:

```
```typescript
```

```
const sendSlackAlert = async (webhookUrl: string, alertType: 'price' | 'supply' | 'brief') => {
 if (!webhookUrl || !webhookUrl.includes('hooks.slack.com')) {
 toast.error('⚠️ Please configure your Slack webhook URL first!');
 return;
 }
}
```

```
// Use same content generation as Discord
```

```
let content = '';
```

```
try {
```

```
 const { data } = await supabase.functions.invoke('chat-ai', {
```

```

 body: {
 question: `Generate a ${alertType} alert for GPU market.
Include specific GPU model, prices, provider, recommendation. Keep it
under 300 words. Current date: ${new Date().toLocaleDateString()}`
 }
 });
 content = data?.answer || getFallbackContent(alertType);
} catch {
 content = getFallbackContent(alertType);
}

const titles = {
 price: '🔥 GPU Price Alert',
 supply: '⚠️ Supply Critical Alert',
 brief: '📊 Daily Market Brief'
};

const message = {
 text: titles[alertType],
 blocks: [
 {
 type: "header",
 text: { type: "plain_text", text: titles[alertType] }
 },
 {
 type: "section",
 text: { type: "mrkdwn", text: content }
 },
 {
 type: "context",
 elements: [{ type: "mrkdwn", text: `🤖 GPUWISE | ${new
Date().toLocaleString()}` }]
 }
]
};

await fetch(webhookUrl, {
 method: 'POST',
 mode: 'no-cors',
 headers: { 'Content-Type': 'application/json' },
 body: JSON.stringify(message)
});

toast.success('✅ Alert sent to Slack!');
};

```

```

6. Reuse Dynamic Content Generation:

Use the SAME `generateDynamicAlert()` function from Discord integration:

- Same Gemini AI generation
- Same prompts
- Just different message formatting for Slack

7. Slack-Specific Formatting:

Format the Gemini response for Slack markdown:

- Use `\*bold\*` instead of `\*\*bold\*\*`
- Use `\_italic\_` instead of `\*italic\*`
- Slack supports emoji codes like `:chart\_with\_upwards\_trend:`
- Add clickable button to view dashboard

8. Loading States:

While sending:

- Show: "🗨️ Sending to Slack..."
- Disable button
- Show spinner

9. Visual Design:

- Slack brand colors (purple #4A154B)
- Slack logo/icon
- Same professional card style as Discord
- Clear separation from Discord section

10. Side-by-Side Display:

Layout on Integrations page:

```

Real-Time Alerts	
Discord 🗨️ [Setup] [Buttons]	Slack 🗨️ [Setup] [Buttons]

```

Or stack them vertically with clear sections.

11. Add Comparison Note:

Small info box:

"💡 Choose Discord, Slack, or both! Alerts can be sent to multiple platforms simultaneously."

Reuse the same dynamic content generation for efficiency!

```

---

## 5. SLACK INTEGRATION

(Same as Discord Integration above - already included)

---

## 6. ZAPIER INTEGRATION FIX

```

Fix the webhook sending error for Zapier and Slack integrations:

Problem: CORS/Network Error

The fetch requests to external webhooks are failing. Fix this by:

1. Update Webhook Send Functions:

For both Zapier and Slack, update the fetch calls to handle CORS properly:

```typescript

// For Zapier

```
const sendToZapier = async (eventData: any) => {
 const zapierUrl = localStorage.getItem('zapier_webhook_url');
```

```
 if (!zapierUrl || !zapierUrl.includes('hooks.zapier.com')) {
 toast.error('⚠️ Please configure your Zapier webhook URL first!');
 return;
 }
}
```

```
try {
```

```
 // Use mode: 'no-cors' for external webhooks
```

```
 const response = await fetch(zapierUrl, {
```

```

 method: 'POST',
 mode: 'no-cors', // ADD THIS
 headers: {
 'Content-Type': 'application/json'
 },
 body: JSON.stringify(eventData)
 });

 // With no-cors, we can't read the response
 // So just assume success if no error thrown
 toast.success('✅ Event sent to Zapier! Check your Zap
history.');
```

```

} catch (error) {
 console.error('Zapier error:', error);
 toast.error('❌ Failed to send. Please check your webhook URL.');
```

```

}
};

// For Slack
const sendSlackAlert = async (webhookUrl: string, alertType: string)
=> {
 if (!webhookUrl || !webhookUrl.includes('hooks.slack.com')) {
 toast.error('⚠️ Please configure your Slack webhook URL first!');
 return;
 }

 // Generate content (use your existing function)
 const content = await generateDynamicAlert(alertType);

 const slackMessage = {
 text: `GPUWISE Alert: ${alertType}`,
 blocks: [
 {
 type: "section",
 text: {
 type: "mrkdwn",
 text: content
 }
 }
]
 };

 try {
 const response = await fetch(webhookUrl, {

```

```

 method: 'POST',
 mode: 'no-cors', // ADD THIS
 headers: {
 'Content-Type': 'application/json'
 },
 body: JSON.stringify(slackMessage)
 });

 // With no-cors, assume success if no error
 toast.success('✅ Alert sent to Slack! Check your channel.');
```

```

} catch (error) {
 console.error('Slack error:', error);
 toast.error('❌ Failed to send. Please check your webhook URL.');
```

```

}
};
```

```

2. Add Clear User Instructions:

Update the webhook sections to include:

```

**For Zapier:**
"💡 Note: Due to browser security, we can't verify delivery. Check
your Zapier dashboard → Zap History to confirm the webhook was
received."

**For Slack:**
"💡 Note: Check your Slack channel to confirm the message arrived. If
nothing appears, verify your webhook URL is correct."
```

Apply the fix that works best for your time constraints!

✅ THAT'S ALL OF THEM!

These are the 6 main prompts you gave to Lovable during our conversation.

Copy and paste these into Lovable in this order:

1. Branding & Footer
2. Status Messaging
3. Coming Soon Modals
4. Discord Integration (if not already done)
5. Slack Integration (if not already done)
6. Zapier Integration Fix (if needed)

WHAT'S NOT IN LOVABLE:

These features you built BEFORE our conversation:

-  Simulator
-  AI Chat
-  Scenarios
-  Learn Hub
-  Dashboard
-  Google Sheets Export

Those are already in your Lovable project!

READY TO USE!

Just copy-paste these prompts into Lovable's prompt box, one at a time, and let it build!
